

SPICED

Petition Pt. 5

Editing Profile & Deleting Signature

Functionality

- ▶ Adding a profile editing feature
- ▶ New template with pre-populated fields containing user info.
- ▶ Updating our database when user changes their information
 - ▶ If providing information for the first time (e.g. age, city, url), we will be **inserting** information in the database
- ▶ Adding signature deletion

Let's see what that looks like..

Pre-populating Input Fields

Pre-populating data

We'll need data from our
Users & User_Profiles tables

We'll want the following info:

- ▶ First name
- ▶ Last name
- ▶ Email
- ▶ Age (if available)
- ▶ City (if available)
- ▶ Url (if available)

You get to practice more with joins! 🎉🎊😊

Updating Users & User_Profiles Tables

Update Profile

Users Table

We need to update either **3 or 4** columns!

If user **doesn't enter a password** → **3 columns**

- First name
- Last name
- Email

If user **enters a new password** → **4 columns**

- First name
- Last name
- Email
- Password**

Update Profile

User_Profiles Table

Not every user will have a row in user_profiles!

- ▶ If no row exists, we have to do an **INSERT**
- ▶ If row exists, we have to do an **UPDATE**

How can we figure out if user has row or not / whether to do an INSERT or UPDATE??

We'll be using an **UPSERT**!

Let's take a look at the UPSERT syntax!

Signature Deletion ✎ ✗
